

PRODUCT PROFILE and FEATURES

PROFILE

The design recognizes and separates all lifting and maneuvering functions from the attitude of the vehicle or surrounding terrain. The lifting section of the machine is maintained in a horizontal plane and consequently no slewing forces act on the suspended load. Ezyloader can operate on uneven ground with no dangerous side effects. It can operate on inclines of up to 22° slope without problems. Suitable for installation at any position on the vehicle. In most cases no stabilizing legs are required.

FEATURES

- Lift maximum capacity at any position
- No compromise on lifting ability at full reach
- Split boom system allows easy maneuverability around obstacles
- All models are suitable for installation at any point on the vehicle
- All models feature unique pushbutton operated leveling system
- Powerful electric winches eliminate lifting effort
- Hydraulic winch available as optional extra 125 & 200 models
- Remote cordless controller available as optional extra
- Various lifting attachments available for specific applications
- Optional stabilizer legs available if required
- One person operation reduces wage costs
- Simple controls easily mastered; basically UP/DOWN and LEVEL
- Productivity gains available with integration of specialized attachments
- Setup time is less than one minute in most circumstances
- Maneuverability allows easy access to correctly place load

SAFETY CONSIDERATIONS

- Eliminates all lifting during loading operation
- Unique design ensures ALL loading is downhill
- Specific lifting attachments ensure safe loading at all times
- Operator works directly alongside the load, not from remote location
- Operator can actually hold and always be in full control of the load
